

### Self-service access to property relation information

Provide customers with answers to frequently asked questions such as “when is my bin day?” or “what is my property zoning?” via self-service facilities on council websites, using council property and spatial data.

### Intuitive interface

Via a simple address search or mobile GPS, the public can quickly and easily access council information. Spatial data that is managed and maintained in IntraMaps is presented in a simple and intuitive way, so that users do not need to concern themselves with the complexities of a comprehensive mapping application.

### Simple and secure for administrators to manage and create

IntraMaps MapBuilder is easily managed in IntraMaps Config Manager and allows administrators to efficiently manage all spatial and non-spatial data. The intuitive browser-based MapBuilder App allows for maps to be created and styled to match the theme of your website.

In minutes, multiple MapBuilder maps can be created and deployed via the council website, helping you to engage with and provide useful information to your customers.
