# Work Schedule & Dispatch

Achieve optimum resource utilisation.

## Key features and benefits

- Easy-to-use, clear visibility of work resources and their assigned work
- Move existing work and non-scheduled work dynamically
- Allows for field and desktop scheduling
- Spatially schedule via GIS

Work Schedule and Dispatch is an easy to use solution for operational staff, providing a graphical calendar based 'drag and drop' user interface for managing resources and work requirements. It allows for Work Orders to be scheduled for individuals or crews, and if used in conjunction with the TechnologyOne Mobile Solution, the work order can be dispatched to the mobile device.

### **Enhanced scheduling capability**

A simple-to-use calendar view allows you to effectively schedule work for your resources over a user-defined date range utilising drag and drop functionality. Visibility of other scheduled work for the defined period and non-scheduled work is also provided.

### **Re-scheduling of work orders and resources**

Maintenance planners can move work around interactively in a calendar view, in order to optimise their resources and Work Order completions. Previously scheduled work and/or dates can easily be re-assigned if required.

### **Schedule additional work**

As well as having visibility of non-scheduled work, maintenance planners can dynamically schedule this work, allocating it to resources over a defined period.

This functionality supports the overall goal of maximising resource utilisation for a defined period.

### **Calendar interface**

The calendar scheduling interface is integral to the solution. It is an intuitive interface and is designed for operational personnel requirements.

Features include:

- Drag and drop method of input
- Colour coded work order priorities
- Different calendar views including day view and week view
- Summary work order information displaying on calendar view (remove need for drill down)

### **HRP Integration**

Employee leave and training can be displayed so that work can be scheduled around these commitments. Employee skills, licences, qualifications and competencies can be displayed to ensure employees are qualified to perform the work.

### **iCal Integration**

Support for iCal integration allows the schedule to see all resources available. View calendar entries from Outlook, Gmail and other mail programs.
